Steyr 220 Roadster body Gläser

Rare exotic from an Austrian automobile manufacturer

Steyr 220 Roadster body Gläser

Rare exotic from an Austrian automobile manufacturer

Steyr - a small town in Austria and yet an important location in automotive history. The Steyr automobile factory of the same name has made a significant contribution to the history of automobile manufacturing, particularly in Austria. Many of the vehicles produced by Steyr, particularly from the period before the Second World War, are now coveted collector's items and are regarded as symbols of quality, craftsmanship and innovation.

While Steyr was initially known primarily for agricultural and simpler vehicles, the company became a serious player in the automotive industry with the 220. In total, over 24,000 units were produced in various body variants, including by renowned body manufacturers such as Weinsberg and Gläser. The Gläser body of the Steyr 220 Roadster is a masterpiece of design and craftsmanship. With elegant lines and a timeless elegance, it embodies the style and class of the 1930s. The body is not only aesthetically pleasing, but also aerodynamically optimized to ensure optimum performance and efficiency. Equipped with a 6-cylinder in-line engine with 50 - 55 hp, it was sufficiently motorized at the time to gain recognition as a sports car.

The car:

- 6-cylinder in-line engine 2,2 Liter
- approx. 55 hp
- 4-speed gearbox
- Built 1939 Delivery to Gläser

The Steyr 220 Roadster presented here is one of fewer than 10 cars produced. Manufactured in 1939, it already has the fuel pump that was missing in the earlier specifications.

The vehicle was completely and lovingly rebuilt with a great deal of expertise. This can be seen above all in the detailed solutions which, where original parts could not be used, were reproduced at enormous expense. It is now in immaculate condition.

Price on request. I look forward to talking to you personally.
